TracCloud is a complete management solution for the specific needs of learning, writing, tutoring, academic skills, and other centers that support students in higher education. As a cloud-based application, TracCloud provides on-demand access to essential tools such as appointment scheduling, logging visits and activity reports. Contacts are recorded in any physical or online environment. Appointments and schedules are managed and accessed on multiple criteria. Integration with campus information systems can link course enrollments and other critical data.

TracCloud works with Redrock's modules:

## **SAGE**

SAGE Early Alert module allows quick identification of potential problems by providing early alerts. Via alerts, customized referrals and targeted emails allow follow-up and reporting.

## **Q2**

Q2 Tables module dynamically manages study and worktable tutoring services and advising scenarios as well as tracking total time and individual contact data.

## **SurveyTrac**

Integration of custom surveys to students and consultants allows you to capture the subjective information needed to address student's needs.
